radio::Modulator	19
radio::Sinusoid	19
radio::ZDomain	21

Chapter 4

File Index

4.1 File List

Here is a list of all files with brief descriptions:

makefile	23
etc/dxygen.config	23
src/alsa_test.cpp Tests sinusoidal tone generation	23
src/baseband_filter_test.cpp Tests sinusoidal tone generation	24
src/definitions.hpp Contains declarations of system-independant (universal size) integers and float types, shortened type names for some commonly used types, and enumerations	25
src/fft_test.cpp Tests FFT, IFFT, and Hilbert implementations	28
src/fft_test2.cpp Tests FFT, IFFT, and Hilbert implementations in zdomain.hpp	31
src/Filter.hpp Defines the Filter class	32
src/fvectors.hpp Defines the transfer function coefficients used in the instances of the Filter class in this program	34
src/iq_test.cpp Generates test IQ signal	35
src/mic_test.cpp Tests getting mic input via ALSA May not even compile at the moment	37
src/modulation.hpp	37
src/piped_test.cpp	39
src/Sinusoid.hpp	39
src/ZDomain.hpp This is an abandoned, overly complicated attempt to have a class housing z-domain functions .	40
src/zdomain.hpp Contains the functions to manipulate sequential data in the frequency (z) domain	41

Chapter 5

Namespace Documentation

5.1 radio Namespace Reference

Contains the classes for the various types of modulation supported by the program.

Classes

- class [Filter](#)
- class [Modulator](#)
- class [Sinusoid](#)
- class [ZDomain](#)

Enumerations

- enum [Age](#) { [OLD](#), [NEW](#) }
- enum [Fractional](#) { [NUM](#), [DEN](#) }
- enum [ModulationType](#) {
 [ModulationType::DSB_LC](#), [ModulationType::DSB_SC](#), [ModulationType::USB_FILTERED](#), [ModulationType::USB_HILBERT](#),
 [ModulationType::LSB_FILTERED](#), [ModulationType::LSB_HILBERT](#), [ModulationType::FM_NARROW](#),
 [ModulationType::FM_WIDE](#) }

Functions

- void [aconj](#) ([cfloat32](#) *data, [uint32](#) size)
- void [fft](#) ([cfloat32](#) *data, [uint32](#) size)
- void [hilbert](#) ([float32](#) *data, [float32](#) *dest, [uint32](#) size)
- void [ifft](#) ([cfloat32](#) *data, [uint32](#) size)
- void [makeIQ](#) ([float32](#) *data, [float32](#) *dest, [uint32](#) size)

Variables

- [fparams](#) [F_BASEBAND](#)
- [fparams](#) [F_LOWERSIDEBAND](#)
- [fparams](#) [F_UPPERBAND](#)
- const [uint32](#) [FREQ_INTERMEDIATE](#) = 20000
- const [uint32](#) [SAMPLING_RATE](#) = 48000

5.1.1 Detailed Description

Contains the classes for the various types of modulation supported by the program.

contains the [Sinusoid](#) class

This namespace contains all the classes, functions, and enumerations used in the application.

Author

Samuel Andrew Wisner, awisner94@gmail.com

5.1.2 Enumeration Type Documentation

5.1.2.1 enum radio::Age

Describes the age of a filter (from last Pass() or in this Pass())

Enumerator

OLD
NEW

Definition at line 50 of file definitions.hpp.

5.1.2.2 enum radio::Fractional

Describes the numerator and denominator of a z-domain transfer function

Enumerator

NUM
DEN

Definition at line 55 of file definitions.hpp.

5.1.2.3 enum radio::ModulationType [strong]

Describes a form of modulation.

Enumerator

DSB_LC
DSB_SC
USB_FILTERED
USB_HILBERT
LSB_FILTERED
LSB_HILBERT
FM_NARROW
FM_WIDE

Definition at line 60 of file definitions.hpp.

5.1.3 Function Documentation

5.1.3.1 void radio::aconj (cfloat32 * data, uint32 size)

Replaces the values in an array of complex float32's with their respective conjugates.

Parameters

<i>data</i>	the array whose values should be replaced with their respective conjugates
<i>size</i>	the number of elements in the data array

Definition at line 84 of file zdomain.hpp.

Here is the caller graph for this function:

5.1.3.2 void radio::fft (cfloat32 * data, uint32 size)

Replaces the values of an array of cfloat32's with the array's DFT using a decimation-in-frequency algorithm.

This code is based on code from http://rosettacode.org/wiki/Fast_Fourier_transform#C.↵2B.2B.

Parameters

<i>data</i>	the array whose values should be replaced with its DFT
<i>size</i>	the number of elements in the data array

Definition at line 90 of file zdomain.hpp.

Here is the caller graph for this function:

5.1.3.3 void radio::hilbert (float32 * data, float32 * dest, uint32 size)

Performs the hilbert transform of an array of float32's.

Parameters

<i>data</i>	the source array of the REAL numbers of which to take the Hilbert transform
-------------	---

<i>dest</i>	the destination array of REAL numbers for the results of the Hilbert transform
<i>size</i>	the number of elements in the data and dest arrays

Definition at line 138 of file zdomain.hpp.

Here is the call graph for this function:

Here is the caller graph for this function:

5.1.3.4 void radio::ifft (cfloat32 * data, uint32 size)

Replaces the values of an array of cfloat32's with the array's inverse DFT.

This code is based on code from http://rosettacode.org/wiki/Fast_Fourier_transform#C.↵2B.2B.

Parameters

<i>data</i>	the array whose values should be replaced with its inverse DFT
<i>size</i>	the number of elements in the data array

Definition at line 158 of file zdomain.hpp.

Here is the call graph for this function:

Here is the caller graph for this function:

5.1.3.5 void radio::makeIQ (float32 * data, float32 * dest, uint32 size)

Produces an interleaved array of first an element from an original array of data and then an element from the original data's Hilbert transform. This function is intended to generate a two-channel output (I/Q output) for mixing applications.

Parameters

<i>data</i>	the original data (left channel)
<i>dest</i>	the interleaved data (left channel original data, right channel transformed data) twice the size of the original data array
<i>size</i>	the number of elements in the data array (NOT in the destination array)

Definition at line 168 of file `zdomain.hpp`.

Here is the call graph for this function:

Here is the caller graph for this function:

} }
```

Upper-sideband filter coefficients. Generated with MATLAB 2015A.

Definition at line 69 of file fvectors.hpp.

5.1.4.4 const uint32 radio::FREQ_INTERMEDIATE = 20000

The default intermediate carrier frequency

Definition at line 24 of file modulation.hpp.

5.1.4.5 const uint32 radio::SAMPLING_RATE = 48000

The default sampling rate (frequency)

Definition at line 29 of file modulation.hpp.

Chapter 6

Class Documentation

6.1 radio::Filter Class Reference

```
#include <Filter.hpp>
```

Public Member Functions

- [Filter](#) ([float32](#) **data*, [uint32](#) *size*, [fparams](#) &*diffEq*)
- void [Pass](#) ()

Protected Attributes

- [uint8](#) *eqLength*
- [uint32](#) *size*
- [float32](#) * *data*
- [fparams](#) *diffEq*
- [fparams](#) *prev*

6.1.1 Detailed Description

This class implements a z-domain filter on a specified array of float32's (a.k.a. singles, floats). It requires the transfer function coefficients already be calculated (i.e., it does not generate the coefficients based on desired filter characteristics). MATLAB and its Signal Processing Toolbox can be used to generate the coefficients.

While this class is designed to implement a single-section filter, several instances of the class can be created and run over the data array sequentially to effectively implement a multi-section filter.

The class is designed (but not tested!) to allow for a z-domain transfer function with different orders of the zeros (numerator) and poles (denominator).

Definition at line 31 of file Filter.hpp.

6.1.2 Constructor & Destructor Documentation

6.1.2.1 radio::Filter::Filter ([float32](#) * *data*, [uint32](#) *size*, [fparams](#) & *diffEq*)

Initializes [Filter](#) based on a difference equation.

Parameters

<i>data</i>	array to be filtered. The filtered data will be placed here.
<i>size</i>	number of elements in the data array
<i>diffEq</i>	a vector containing two vectors of float32's (a.k.a. singles, floats), containing the numerator and denominator coefficients, respectively, of the z-domain transfer function of the filter in descending order (z^0 , z^{-1} , z^{-2} , etc.).

Definition at line 91 of file Filter.hpp.

6.1.3 Member Function Documentation

6.1.3.1 void radio::Filter::Pass ()

Passes the data array through the digital filter and accounts for $x[n]$ and $y[n]$ values from the previous call to [Pass\(\)](#).

Definition at line 111 of file Filter.hpp.

Here is the caller graph for this function:

6.1.4 Member Data Documentation

6.1.4.1 float32* radio::Filter::data [protected]

A pointer to the data array that should be filtered when [Pass\(\)](#) is called.

Definition at line 71 of file Filter.hpp.

6.1.4.2 fparams radio::Filter::diffEq [protected]

A vector containing two vectors of float32's (a.k.a. singles, floats), containing the numerator and denominator coefficients, respectively, of the z-domain transfer function of the filter in descending order (z^0 , z^{-1} , z^{-2} , etc.).

Definition at line 79 of file Filter.hpp.

6.1.4.3 uint8 radio::Filter::eqLength [protected]

The order of the filter transfer function (i.e., the maximum of the orders of the numerator and denominator).

Definition at line 60 of file Filter.hpp.

6.1.4.4 fparams radio::Filter::prev [protected]

Vectors of the original ($x[n]$) and filtered ($y[n]$) values of the data array used to calculate the first filtered values of the data array. In spite of the type name, this variable does NOT contains filter parameters but rather the same data type that fparams represents.

Definition at line 88 of file Filter.hpp.

6.1.4.5 uint32 radio::Filter::size [protected]

The number of elements in the data array.

Definition at line 65 of file Filter.hpp.

The documentation for this class was generated from the following file:

- src/[Filter.hpp](#)

6.2 radio::Modulator Class Reference

```
#include <modulation.hpp>
```

Public Member Functions

- void [Mod](#) ()

6.2.1 Detailed Description

This class, while not intended to be called directly, is a superclass for the classes of the modulation forms used in this project.

Definition at line 35 of file modulation.hpp.

6.2.2 Member Function Documentation

6.2.2.1 void radio::Modulator::Mod ()

Modulates the audio currently in the data array.

Definition at line 96 of file modulation.hpp.

Here is the call graph for this function:

The documentation for this class was generated from the following file:

- src/[modulation.hpp](#)

6.3 radio::Sinusoid Class Reference

```
#include <Sinusoid.hpp>
```

Public Member Functions

- [Sinusoid](#) ([float32](#) frequency, [uint32](#) samplingRate)
- [~Sinusoid](#) ()
- [float32 next](#) ()
- [float32 nextShifted](#) ()

6.3.1 Detailed Description

This class creates an easy-to-call sinusoid that will preserve its phase throughout its lifespan. Essentially, it is a ring buffer.

Definition at line 19 of file Sinusoid.hpp.

6.3.2 Constructor & Destructor Documentation

6.3.2.1 `radio::Sinusoid::Sinusoid (float32 frequency, uint32 samplingRate)`

Creates a ring-buffer sinusoid.

Definition at line 71 of file Sinusoid.hpp.

6.3.2.2 `radio::Sinusoid::~Sinusoid ()`

Free arrays malloc'd in the constructor.

Definition at line 86 of file Sinusoid.hpp.

6.3.3 Member Function Documentation

6.3.3.1 `float32 radio::Sinusoid::next ()`

Provides the next value of the sinusoid in a manner consistent with a ring buffer.

Definition at line 91 of file Sinusoid.hpp.

Here is the caller graph for this function:

6.3.3.2 `float32 radio::Sinusoid::nextShifted ()`

Provides the next value of the sinusoid shifted 90 degrees in a manner consistent with a ring buffer.

Definition at line 96 of file Sinusoid.hpp.

Here is the caller graph for this function:

The documentation for this class was generated from the following file:

- [src/Sinusoid.hpp](#)

6.4 radio::ZDomain Class Reference

```
#include <ZDomain.hpp>
```

Public Member Functions

- [ZDomain](#) ([float32](#) **orig*, [float32](#) **dest*, [uint16](#) *size*)

- void [fft](#) ()
- void [hilbert](#) ()
- void [ifft](#) ()

Public Attributes

- [uint16](#) *size*
- [float32](#) * *orig*
- [std::complex](#)< [float32](#) > * *temp*

Protected Member Functions

- void [_fft](#) ()
- void [_ifft](#) ()

6.4.1 Detailed Description

Definition at line 23 of file [ZDomain.hpp](#).

6.4.2 Constructor & Destructor Documentation

6.4.2.1 [radio::ZDomain::ZDomain](#) ([float32](#) * *orig*, [float32](#) * *dest*, [uint16](#) *size*)

Definition at line 78 of file [ZDomain.hpp](#).

6.4.2.2 `radio::ZDomain::~~ZDomain ()`

Definition at line 89 of file ZDomain.hpp.

6.4.3 Member Function Documentation

6.4.3.1 `void radio::ZDomain::_fft ()` [protected]

Definition at line 93 of file ZDomain.hpp.

6.4.3.2 `void radio::ZDomain::_ifft ()` [protected]

Definition at line 141 of file ZDomain.hpp.

6.4.3.3 `void radio::ZDomain::fft ()`

6.4.3.4 `void radio::ZDomain::hilbert ()`

Definition at line 149 of file ZDomain.hpp.

6.4.3.5 `void radio::ZDomain::ifft ()`

6.4.4 Member Data Documentation

6.4.4.1 `float32* radio::ZDomain::orig`

Definition at line 34 of file ZDomain.hpp.

6.4.4.2 `uint16 radio::ZDomain::size`

Definition at line 29 of file ZDomain.hpp.

6.4.4.3 `std::complex<float32>* radio::ZDomain::temp`

Definition at line 39 of file ZDomain.hpp.

The documentation for this class was generated from the following file:

- [src/ZDomain.hpp](#)

Chapter 7

File Documentation

7.1 etc/doxygen.config File Reference

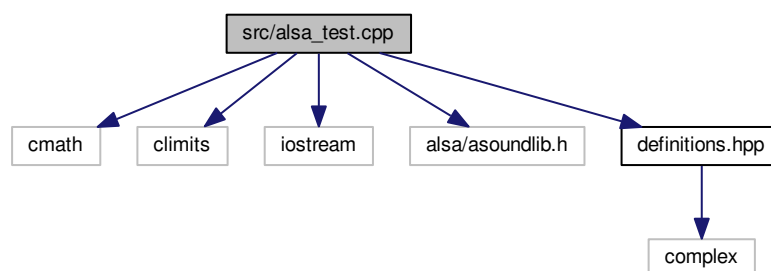

7.2 makefile File Reference

7.3 src/alsa_test.cpp File Reference

Tests sinusoidal tone generation.

```
#include <cmath>
#include <climits>
#include <iostream>
#include <alsa/asoundlib.h>
#include "definitions.hpp"
```

Include dependency graph for alsa_test.cpp:

Functions

- int `main` ()

7.3.1 Detailed Description

Tests sinusoidal tone generation.

Author

Samuel Andrew Wisner, awisner94@gmail.com

Bug clicking noise from sinusoidal discontinuity

Definition in file [alsa_test.cpp](#).

7.3.2 Function Documentation**7.3.2.1 int main ()**

This program tests sinusoidal speaker output through the ALSA API. Not sure if it works. When it did at least compile and run, it produced a sinusoid with an approximately twice-per-second clicking noise.

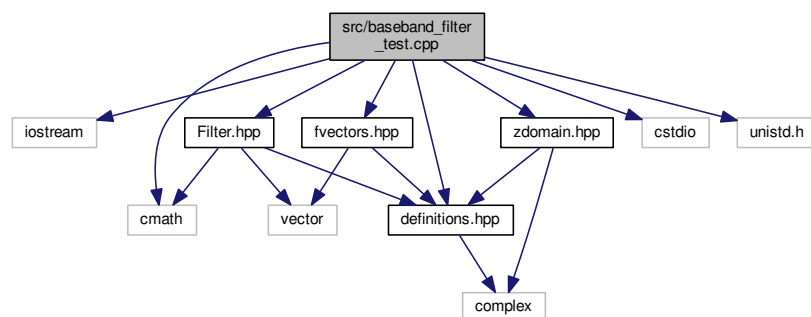

Definition at line 22 of file [alsa_test.cpp](#).

7.4 src/baseband_filter_test.cpp File Reference

Tests sinusoidal tone generation.

```
#include <iostream>
#include <cmath>
#include <cstdio>
#include <unistd.h>
#include "definitions.hpp"
#include "Filter.hpp"
#include "fvectors.hpp"
#include "zdomain.hpp"
```

Include dependency graph for [baseband_filter_test.cpp](#):

**Functions**

- int [main](#) ()

7.4.1 Detailed Description

Tests sinusoidal tone generation.

Author

Samuel Andrew Wisner, awisner94@gmail.com

Definition in file [baseband_filter_test.cpp](#).

7.4.2 Function Documentation**7.4.2.1 int main ()**

This program tests and demonstrates the Filter class and the baseband low-pass filter ($f_p = 1.7$ kHz, $f_s = 3$ kHz, $A_p = 0.5$ dB, $A_s = 60$ dB).

Definition at line 24 of file [baseband_filter_test.cpp](#).

Here is the call graph for this function:

**7.5 src/definitions.hpp File Reference**

Contains declarations of system-independant (universal size) integers and float types, shortened type names for some commonly used types, and enumerations.

```
#include <complex>
```

Include dependency graph for `definitions.hpp`:

This graph shows which files directly or indirectly include this file:

Namespaces

- [radio](#)

Contains the classes for the various types of modulation supported by the program.

Macros

- `#define` [ENUM](#) signed char

Typedefs

- typedef unsigned char [byte](#)
- typedef unsigned char [uint8](#)
- typedef signed char [sint8](#)
- typedef unsigned short [uint16](#)
- typedef signed short [sint16](#)
- typedef unsigned int [uint32](#)
- typedef signed int [sint32](#)
- typedef unsigned long long [uint64](#)
- typedef signed long long [sint64](#)
- typedef float [float32](#)
- typedef double [float64](#)
- typedef std::complex< [float32](#) > [cfloat32](#)
- typedef std::vector
 < std::vector< [float32](#) > > [fparams](#)

Enumerations

- enum [radio::Age](#) { [radio::OLD](#), [radio::NEW](#) }
- enum [radio::Fractional](#) { [radio::NUM](#), [radio::DEN](#) }
- enum [radio::ModulationType](#) {
 [radio::ModulationType::DSB_LC](#), [radio::ModulationType::DSB_SC](#), [radio::ModulationType::USB_FILTERED](#),
 [radio::ModulationType::USB_HILBERT](#),
 [radio::ModulationType::LSB_FILTERED](#), [radio::ModulationType::LSB_HILBERT](#), [radio::ModulationType::FM_NARROW](#), [radio::ModulationType::FM_WIDE](#) }

7.5.1 Detailed Description

Contains declarations of system-independant (universal size) integers and float types, shortened type names for some commonly used types, and enumerations.

Author

Samuel Andrew Wisner, awisner94@gmail.com

Definition in file [definitions.hpp](#).

7.5.2 Macro Definition Documentation

7.5.2.1 `#define ENUM signed char`

Definition at line 14 of file definitions.hpp.

7.5.3 Typedef Documentation

7.5.3.1 `typedef unsigned char byte`

Definition at line 16 of file definitions.hpp.

7.5.3.2 `typedef std::complex<float32> cfloat32`

Defines a type for complex float32's.

Definition at line 35 of file definitions.hpp.

7.5.3.3 `typedef float float32`

Definition at line 29 of file definitions.hpp.

7.5.3.4 `typedef double float64`

Definition at line 30 of file definitions.hpp.

7.5.3.5 `typedef std::vector<std::vector<float32> > fparams`

Defines a type for the filter coefficients.

Definition at line 40 of file definitions.hpp.

7.5.3.6 `typedef signed short sint16`

Definition at line 21 of file definitions.hpp.

7.5.3.7 `typedef signed int sint32`

Definition at line 24 of file definitions.hpp.

7.5.3.8 typedef signed long long sint64

Definition at line 27 of file definitions.hpp.

7.5.3.9 typedef signed char sint8

Definition at line 18 of file definitions.hpp.

7.5.3.10 typedef unsigned short uint16

Definition at line 20 of file definitions.hpp.

7.5.3.11 typedef unsigned int uint32

Definition at line 23 of file definitions.hpp.

7.5.3.12 typedef unsigned long long uint64

Definition at line 26 of file definitions.hpp.

7.5.3.13 typedef unsigned char uint8

Definition at line 17 of file definitions.hpp.

7.6 src/fft_test.cpp File Reference

Tests FFT, IFFT, and Hilbert implementations.

```
#include <complex>
#include <functional>
#include <iostream>
#include <valarray>
```

Include dependency graph for fft_test.cpp:

Typedefs

- typedef std::valarray
< std::complex< double > > [CArray](#)

Functions

- void `fft` (`CArray` &`x`)
- void `ifft` (`CArray` &`x`)
- `std::complex< double >` `hilbert` (`std::complex< double >` `n`)
- int `main` ()

Variables

- const double `PI` = 3.141592653589793238460

7.6.1 Detailed Description

Tests FFT, IFFT, and Hilbert implementations.

Author

Samuel Andrew Wisner, awisner94@gmail.com

Definition in file `fft_test.cpp`.

7.6.2 Typedef Documentation

7.6.2.1 `typedef std::valarray<std::complex<double> > CArray`

Definition at line 14 of file `fft_test.cpp`.

7.6.3 Function Documentation

7.6.3.1 `void fft (CArray & x)`

This code was taken from http://rosettacode.org/wiki/Fast_Fourier_transform#C.2B.2B.

Definition at line 23 of file `fft_test.cpp`.

Here is the caller graph for this function:

7.6.3.2 `std::complex<double> hilbert (std::complex< double > n)`

Definition at line 87 of file `fft_test.cpp`.

Here is the caller graph for this function:

7.6.3.3 void ifft (CArray & x)

Definition at line 72 of file `fft_test.cpp`.

Here is the call graph for this function:

Here is the caller graph for this function:

7.6.3.4 int main ()

Definition at line 91 of file `fft_test.cpp`.

Here is the call graph for this function:

7.6.4 Variable Documentation

7.6.4.1 `const double PI = 3.141592653589793238460`

Definition at line 12 of file `fft_test.cpp`.

7.7 src/fft_test2.cpp File Reference

Tests FFT, IFFT, and Hilbert implementations in [zdomain.hpp](#).

```
#include <complex>
#include <iostream>
#include "definitions.hpp"
#include "zdomain.hpp"
```

Include dependency graph for `fft_test2.cpp`:

Functions

- int [main](#) ()

7.7.1 Detailed Description

Tests FFT, IFFT, and Hilbert implementations in [zdomain.hpp](#).

Author

Samuel Andrew Wisner, awisner94@gmail.com

Definition in file [fft_test2.cpp](#).

7.7.2 Function Documentation

7.7.2.1 int main ()

This program tests the [fft\(\)](#), [ifft\(\)](#), and [hilbert\(\)](#) functions in the [zdomain.hpp](#) file.

This code is based on code from http://rosettacode.org/wiki/Fast_Fourier_transform#C.2B.2B.

Definition at line 22 of file [fft_test2.cpp](#).

Here is the call graph for this function:

7.8 src/Filter.hpp File Reference

Defines the Filter class.

```
#include <cmath>
#include <vector>
#include "definitions.hpp"
```

Include dependency graph for Filter.hpp:

This graph shows which files directly or indirectly include this file:

Classes

- class [radio::Filter](#)

Namespaces

- [radio](#)

Contains the classes for the various types of modulation supported by the program.

7.8.1 Detailed Description

Defines the Filter class.

Author

Samuel Andrew Wisner, awisner94@gmail.com

Definition in file [Filter.hpp](#).

7.9 src/fvectors.hpp File Reference

Defines the transfer function coefficients used in the instances of the Filter class in this program.

```
#include <vector>
#include "definitions.hpp"
```

Include dependency graph for fvectors.hpp:

This graph shows which files directly or indirectly include this file:

Namespaces

- [radio](#)

Contains the classes for the various types of modulation supported by the program.

Variables

- [fparams radio::F_BASEBAND](#)
- [fparams radio::F_LOWERSIDEBAND](#)
- [fparams radio::F_UPPERSIDEBAND](#)

7.9.1 Detailed Description

Defines the transfer function coefficients used in the instances of the Filter class in this program.

Author

Samuel Andrew Wisner, awisner94@gmail.com

Definition in file [fvectors.hpp](#).

7.10 src/iq_test.cpp File Reference

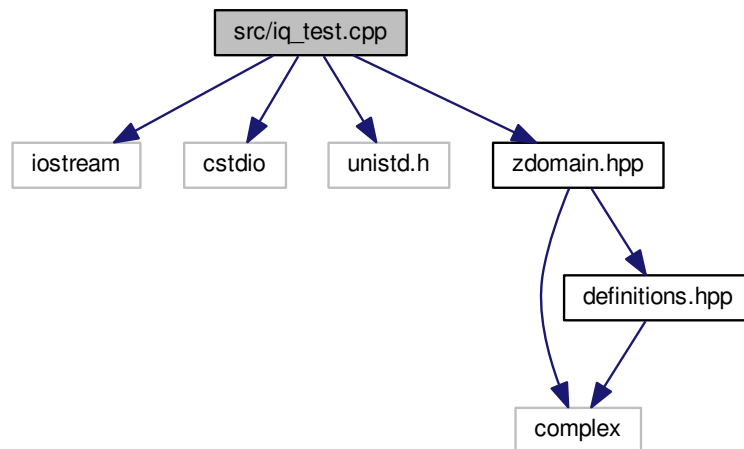

Generates test IQ signal.

```

#include <iostream>
#include <cstdio>
#include <unistd.h>
#include "zdomain.hpp"

```

Include dependency graph for `iq_test.cpp`:

Functions

- int [main](#) ()

7.10.1 Detailed Description

Generates test IQ signal.

Author

Samuel Andrew Wisner, awisner94@gmail.com

Definition in file [iq_test.cpp](#).

7.10.2 Function Documentation

7.10.2.1 int main ()

This small program demonstrates the IQ generation abilities of the [makeIQ\(\)](#) function.

Definition at line 20 of file `iq_test.cpp`.

Here is the call graph for this function:

7.11 src/mic_test.cpp File Reference

Tests getting mic input via ALSA May not even compile at the moment.

```
#include <cmath>
#include <climits>
#include <iostream>
#include <alsa/asoundlib.h>
#include "definitions.hpp"
Include dependency graph for mic_test.cpp:
```

Functions

- int [main](#) ()

7.11.1 Detailed Description

Tests getting mic input via ALSA May not even compile at the moment.

Author

Samuel Andrew Wisner, awisner94@gmail.com

Definition in file [mic_test.cpp](#).

7.11.2 Function Documentation

7.11.2.1 int main ()

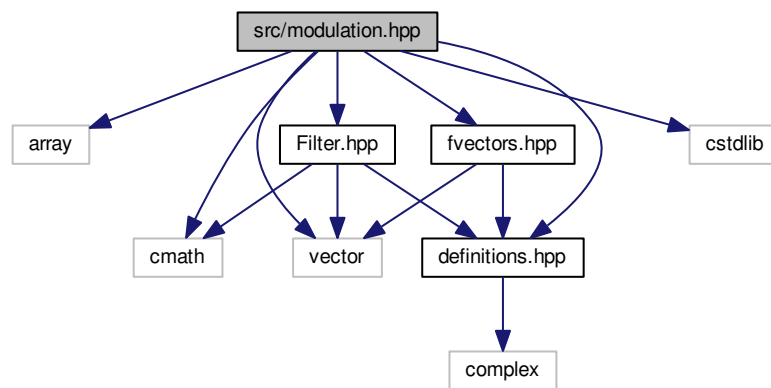

This program tests taking information from the microphone via the ALSA API. Not sure if it works.

Definition at line 21 of file `mic_test.cpp`.

7.12 src/modulation.hpp File Reference

```
#include <array>
```

```
#include <cmath>
#include <cstdlib>
#include <vector>
#include "definitions.hpp"
#include "Filter.hpp"
#include "fvectors.hpp"
Include dependency graph for modulation.hpp:
```

This graph shows which files directly or indirectly include this file:

Classes

- class `radio::Modulator`

Namespaces

- `radio`

Contains the classes for the various types of modulation supported by the program.

Variables

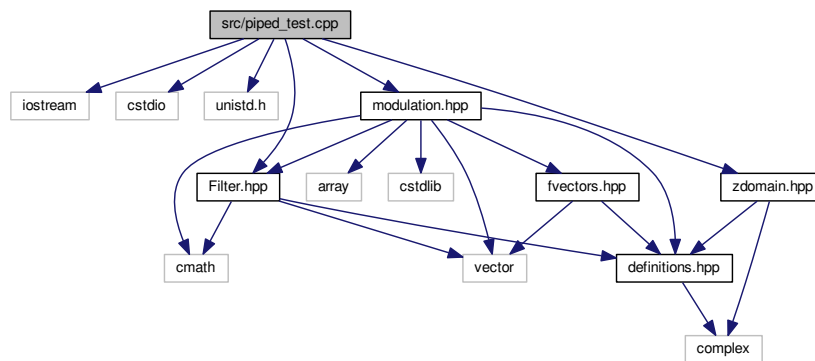

- const `uint32 radio::FREQ_INTERMEDIATE` = 20000

- const `uint32 radio::SAMPLING_RATE` = 48000

7.13 src/piped_test.cpp File Reference

```
#include <iostream>
#include <cstdio>
#include <unistd.h>
#include "Filter.hpp"
#include "modulation.hpp"
#include "zdomain.hpp"
```

Include dependency graph for `piped_test.cpp`:

Functions

- int `main` ()

7.13.1 Function Documentation

7.13.1.1 int main ()

Definition at line 12 of file `piped_test.cpp`.

Here is the call graph for this function:

7.14 src/Sinusoid.hpp File Reference

```
#include <cmath>
```

```
#include <cstdlib>
#include "definitions.hpp"
Include dependency graph for Sinusoid.hpp:
```

Classes

- class [radio::Sinusoid](#)

Namespaces

- [radio](#)

Contains the classes for the various types of modulation supported by the program.

7.15 src/ZDomain.hpp File Reference

This is an abandoned, overly complicated attempt to have a class housing z-domain functions.

```
#include <cmath>
#include <cstring>
#include <complex>
#include <functional>
#include "definitions.hpp"
```

Include dependency graph for ZDomain.hpp:

Classes

- class [radio::ZDomain](#)

Namespaces

- [radio](#)

Contains the classes for the various types of modulation supported by the program.

7.15.1 Detailed Description

This is an abandoned, overly complicated attempt to have a class housing z-domain functions.

Author

Samuel Andrew Wisner, awisner94@gmail.com

Bug Everything. Just everything.

Definition in file [ZDomain.hpp](#).

7.16 src/zdomain.hpp File Reference

Contains the functions to manipulate sequential data in the frequency (z) domain.

```
#include <complex>
#include "definitions.hpp"
```

Include dependency graph for `zdomain.hpp`:

This graph shows which files directly or indirectly include this file:

Namespaces

- [radio](#)

Contains the classes for the various types of modulation supported by the program.

Functions

- void [radio::aconj](#) ([cfloat32](#) *data, [uint32](#) size)
- void [radio::fft](#) ([cfloat32](#) *data, [uint32](#) size)
- void [radio::hilbert](#) ([float32](#) *data, [float32](#) *dest, [uint32](#) size)
- void [radio::ifft](#) ([cfloat32](#) *data, [uint32](#) size)
- void [radio::makeIQ](#) ([float32](#) *data, [float32](#) *dest, [uint32](#) size)

7.16.1 Detailed Description

Contains the functions to manipulate sequential data in the frequency (z) domain.
